

# Watts Bridge Memorial Airfield

Situated in the picturesque Brisbane Valley

Watts Bridge Memorial Airfield is located in South East Queensland, Australia approximately 5nm from the small country township of Toogoolawah and a pleasant scenic drive from the state's capital city of Brisbane. To the south of the airfield is the particularly scenic Brisbane Valley area featuring open rolling pastures and cleared farming country bordering Wivenhoe Dam. To the north and west is the Great Dividing Range, gateway to the Darling Downs and beyond. A short flight to the east passes the grand Glass House Mountains en route to the most picturesque bay and beach scenery imaginable.

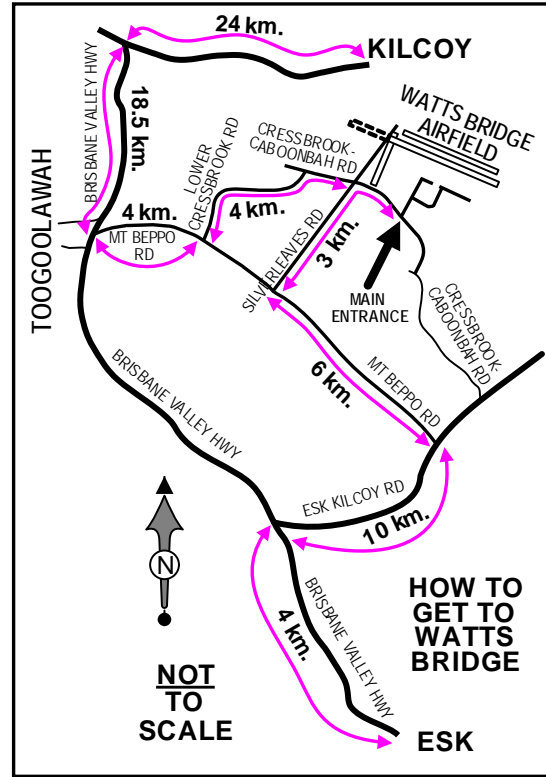

The Watts Bridge area makes for extremely safe recreational flying with many open paddocks surrounding the airfield. Weather conditions are generally most amenable with a prevailing wind from the South East - usually less than 15 knots. In summer expect a cooling North Easterly sea breeze in the afternoon.

Watts Bridge Memorial Airfield features three well formed grass runways suitable for almost all types of recreational aircraft. The airfield is used by aircraft such as the Trojan T28, AN2, Lancair, Pitts Special plus a variety of vintage, warbird, ultralight, glider and general aviation aircraft.
